GENERAL NOTES

- 1. 'A circuit' is the flight path around an aerodrome at a specified height, which facilitates an aircraft's positioning from a point on the take-off path of a given runway to a point, on the approach path of the same runway, from which a landing can be made.
- 2. 'Satisfactorily' means that the applicant is in full control of his aeroplane at all times, and that the successful outcome of a manoeuvre is never in doubt. 'Unassisted' means without verbal prompting or physical assistance with the flying controls.
- 3. In the aeroplane 'Simulated engine failure' means with throttle lever set to idle so as to represent a failed engine as nearly as possible. The accelerate-stop tests required by this Form should be carried out as follows:
 - In the aeroplane, simulated engine failure should be initiated at a **speed and height** which will not hazard the safety of the aircraft.
 - Simulated engine failure for abort drills should be initiated at a speed which is close to V₁ but which is sufficiently below to require a decision to stop, e.g. V₁ -5 or -10 knots.
- 4. Endorsement of the licence will date from the completion of these tests.
- 5. Only persons holding written authorisation from the Civil Aviation Authority of Fiji in respect of the aeroplane used for this test may sign for the satisfactory completion of any test on this form.
- 6. This issue of CAAF Form PL105AN is for use in respect of all BE-76 aeroplanes.
